COMPANY PROFILE

公司简介

辰奇科技（上海）有限公司

ZEQI TECHNOLOGY(SHANGHAI)CO.,LTD

辰奇科技(上海)有限公司 是一家集研发、生产、销售、服务于一体的动力传动装置专业制造商。总部位于中国上海。一直坚持“想客户之所想，急客户之所急”的企业理念，致力于打造世界一流的中国传动品牌。

公司自主产品有：伺服电动缸、行星减速机、多自由度运动平台、HK线性模组等。公司始终视品质为生命，分工细致，职责明确，快速反应，衔接有序，严把质量关。从每个零件的最初进料到装配完成品的运转，都检测测试，以完全符合客户要求及公司的品质标准。

公司长期以来致力于动力传动行业的不断发展。并与众多知名品牌企业建立了良好、稳固的合作伙伴关系，形成了一个具有强大生命力，相互依存，共同发展的合作机制。信奉：“品质第一，顾客至上”的原则，凭借领先的技术、丰富的行业应用经验以及优良的产品品质、专业规范的售后服务与现代化的市场管理理念，迅速发展壮大。产品被广泛用于工业机器人、新能源、工程机械、印刷机械、医疗机械、纺织机械、包装机械、激光切割设备、汽车制造等领域。获得了各界广泛的认可。

让客户享受到质量可靠、性价比高、服务完善的传动装置产品是我们的奋斗目标，公司坚持以客户的需求为中心，持续改进，为客户提供经济、可靠的动力传动方案。让科技转化为生产力，用专业化的服务帮助客户创造更高的价值！

Zeqi Technology (Shanghai) Co., Ltd. is a professional manufacturer of power transmission devices that integrates research and development, production, sales, and service. The headquarters is located in Shanghai, China. We have always adhered to the corporate philosophy of "thinking about what customers want and being anxious about what customers need", and are committed to creating a world A first-class Chinese transmission brand.

The company's independent products include servo electric cylinders, planetary reducers, multi degree of freedom motion platforms, HK linear modules, etc. The company always regards quality as its life, with meticulous division of labor, clear responsibilities, quick response, orderly connection, and strict quality control. From the initial feeding of each component to the operation of the assembled product, testing is conducted to fully meet customer requirements and company quality standards.

The company has long been committed to the continuous development of the power transmission industry. And we have established good and stable partnerships with numerous well-known brand enterprises, forming a strong vitality, interdependence, and common development cooperation mechanism. Believing in the principle of "quality first, customer first", with leading technology, rich industry application experience, excellent product quality, professional and standardized after-sales service, and modern market management philosophy, we have rapidly developed and grown. The products are widely used in industrial robots, new energy, engineering machinery, printing machinery, medical machinery, textile machinery, packaging machinery, laser cutting equipment, automotive manufacturing and other fields. It has gained widespread recognition from all walks of life.

Our goal is to provide customers with reliable quality, cost-effective, and comprehensive service transmission products. The company adheres to customer-centered needs, continuous improvement, and provides customers with economical and reliable power transmission solutions. Transform technology into productivity, and use professional services to help customers create higher value!

Corporate culture: innovation, cooperation, and win-win situation!

Business philosophy: Taking practicality as the foundation and honesty as the foundation: focusing on technology and winning through service.

企业文化：创新、合作、共赢！

经营理念：以实为本，以诚取信，以技术为主，以服务取胜。

PRODUCT OVERVIEW

产品概述

行星减速机是一种用途广泛的减速设备，可以降低电机的转速，同时增大输出转矩，提升载荷能力。

行星减速机主要传动结构：

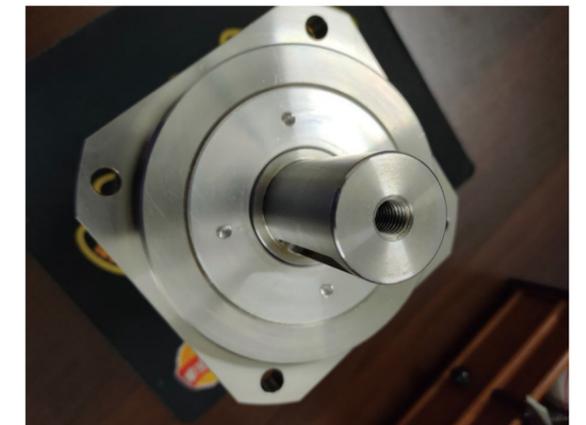

行星轮，太阳轮，内齿圈，驱动电机，传动轴。

Main transmission structure is: planetary, solar wheel, gear ring, drive motor, drive shaft.

● 行星减速机优点

具有高精度、高刚性、高扭矩、高效率、高速比、高寿命、低惯性、低振动、低噪音、低温升、外观美、结构轻小、安装方便、定位精准等特点，适用于交流伺服马达、直流伺服马达、步进马达、液压马达的增速与减速传动。行星减速机的传动效率一般的都在95%以上，应用广泛。

Has high precision, high rigidity, high load, high efficiency, high speed ratio, high life, low inertia, low vibration, low noise, low temperature rise, appearance beautiful, light and small structure, easy installation, positioning and other characteristics, suitable for ac servo motor, dc servo motor, stepping motor, hydraulic motor of growth and slow down transmission. The transmission efficiency of high-precision planetary reducers is generally above 95%, and they are widely used.

行星减速机用途：

行星减速机广泛应用于精密加工机床、航天工业、智能家居汽车制造、船舶工业、半导体设备、印刷机械，食品包装、自动化产业、工业机器人、医疗检验、精密测试仪器和自动化高精度的机电产品行业。

Planetary reducers are widely used in precision machining machine tools, aerospace industry, smart home automotive manufacturing, shipbuilding industry, semiconductor equipment, printing machinery, food packaging, automation industry, industrial robots, medical inspection, precision testing instruments, and high-precision automated mechanical and electrical product industries.

PRODUCT FEATURES

行星减速机——产品特性

| 齿轮

齿轮材质采用优质合金钢20CrmoTi，经碳-氮共渗处理，从而获得最佳的耐磨性和耐冲击韧性，全部磨齿，精度5-6级。

20 crmoti gear material adopt high quality alloy steel, carbon - nitrogen altogether permeability treatment, so as to get the best wear resistance and impact toughness, full gear grinding, precision grade 5 to 6.

| 行星架

输出行星架采用优质合金钢42Crmo,一体式(双支撑)的结构设计，前后轴承大跨距分布于箱体内部，形成稳定的一体式结构，以确保较高的扭转刚性和精度。

Output the planet carrier is made of high quality alloy steel 42 crmo, the structure design of the one-piece (double) before and after bearing large span distributed in the casing, forming stable one-piece structure, in order to ensure high torsional rigidity and accuracy.

| 齿圈

齿圈与输出壳体采用一体化设计，材质采用优质合金钢42Crmo.经热锻成形，从而获得较高的材料密度，外观镀镍处理。一体化设计能保证所有几何尺寸一次性加工完成，与其它内嵌式、夹装式等结构相比具有更高的精度和强度。

The gear ring and output housing adopt an integrated design, and the material is high-quality alloy steel 42Crmo. After hot forging, high material density is obtained, and the appearance is nickel plated. The integrated design can ensure that all geometric dimensions are processed at once, and has higher accuracy and strength compared to other embedded, clamped, and other structures.

| 输入轴

输入轴与锁紧装置采用一体化设计，材质采用优质合金钢40Cr,双螺栓对称分布，达到动平衡的同时，通过双螺栓的强力锁死，有效防止电机轴传动打滑，实现高精度零背隙的动力传送。

Input shaft and the locking device adopts body design, the material is made of high quality alloy steel 40 cr, double bolt symmetric distribution, to achieve the dynamic balance at the same time, through the strong double bolt lock, effectively prevent the motor shaft driving sliding, achieve high accuracy zero back lash power transmission.

PLANETARY REDUCER SELECTION 行星减速机的选型

选配行星减速机应该遵循适用性和经济性相结合的原则，就是说行星减速机的各项技术指标既能满足设备的要求又能节约成本。“过”与“不及”都会带来成本浪费。选型不当是减速机出现故障的主要原因。因此，正确选用行星减速机非常重要。选用减速机应考虑其结构类型、承载能力、减速比、输出转速、轴向力、径向力、扭转刚度、背障等内在性能指标，也应充分考虑安装形式、工况条件、工作环境等外部因素。为实现快速准确的选型，请参照以下步骤。

Matching machine of decelerate of planet of applicability and economy should follow the principle of combining, is machine of decelerate of planet of the technical indicators can meet asked and can save the cost of the equipment. "A" and "less than" will result in cost waste. Improper selection is the main reason for the failure of the gearbox, accordingly. Correct choose planetary reducer is very important. Choose reducer should consider its structure type, bearing capacity, reduction ratio and the output rotational speed, axial force and radial force, torsional rigidity, back barrier, such as internal performance index, also should give full consideration to the installation form, working condition and the external factors such as work environment. For the convenience of rapid accurate selection, please refer to the following steps.

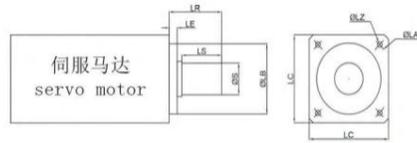

Step1: 减速机规格的确定 Determination the reducer specifications

步骤	说明	代号	参数计算	参数计算

1.40	1.65	1.90	2.40	2.80																																																		
2	扭矩的确定	T2n	T2n>Tc2所选减速机的额定扭矩T2n必须大于计算扭矩Tc2 Tc2=Tr2/Fs(Tc2-计算扭矩 Tr2实际所需扭矩Fs-使用系数)																																																			
3	额定输入转速	n1	允许最大输出转速请参考减速机性能资料																																																			
4	确定减速比	i	i=N1/N2																																																			
5	减速机效率	η	L1≥95%、L2≥92%																																																			
6	根据被驱动设备所需的扭矩或功率，计算减速机的输入功率	P1	P1=(T2×N1) / (9550×i×η)或P1×P2+η																																																			
7	根据计算传动力表确定减速机的规格	T2n, P1n	T2n>T3×F1×F2 P1n>P1×F1×F2																																																			
8	输出轴径向力、轴向力校核	Fr, Fa	根据【减速机性能资料表】对比小于减速机最大径向力、轴向力，频繁启动-停止运转工况硬齿选择加强型																																																			
9	确认使用环境		防护等级、工作温度、化学环境等																																																			
10	根据空间确认安装方式		同轴安装、90°直角安装																																																			
11	确认减速机型号		根据【减速机性能资料表】输入、输出方式等确定具体系列、型号、规格及附件																																																			

Step2: 确定电机 (包括生产厂商、规格型号、性能指标及外形尺寸)

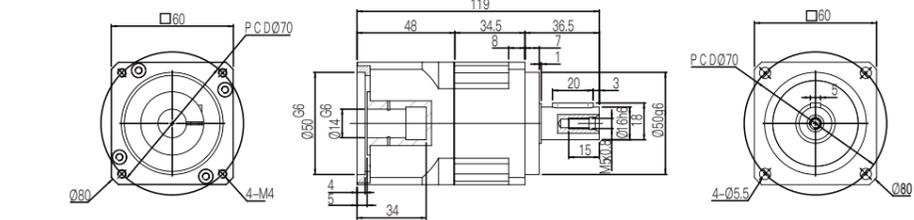

Determine motor (including manufacturers, specifications, performance and overall dimensions)

- 马达型号 The motor model: -----
- 输出功率 The output power: -----
- 额定力矩 The rated torque: -----
- 最大力矩 Maximum moment: -----
- 额定转速 Rated speed: -----
- 最大转速 Maximum speed: -----
- 转动惯量 The moment of inertia: -----
- 轴径 trunnion: -----
- 外径 Outer diameter: -----
- 凸缘 flange: -----
- 中心距 Center distance: -----

Step3: 确定所订减速机规格型号及工厂提供的CAD或PDF图纸，正确书写型号 例如：ZQB060-5-S2-P1

Determine the deceleration machine specifications and ordered factory provide cad or pdf drawings, correct writing models such as: ZQB060-5-S2-P1

速比	1.3-1:10	正常使用寿命	20000 h
额定扭矩	37-55Nm	传动效率	97%
最大扭矩	74-110Nm	噪音	60dB
额定输入转速	4000r/min	环境温度	-20°C ~ +80°C
最大输入转速	6000r/min	惯量	
回程间隙	3-5arcmin	重量	

机型	ZQB060-L1 14-50-70-M4	绘制日期	绘图	行星减速机外形图

REDUCER SPECIAL NOUN EXPLANATION 减速机专用名词解释

- 减速比 Reduction ratio**
输出转速比上输入转速
The output speed than on the input speed
- 额定输入转速 Rated input speed**
减速机的驱动速度，若减速机与电机直接相连，则转速值与电机转速相同。本书中的额定输入转速是在环境温度为20°C的条件下测得的，环境温度较高时请降低转速n1。
The driving speed of the gearbox, if directly connected to the motor, the speed value is the same as the motor speed. The rated input speed in this book is measured under an ambient temperature of 20 °C. Please reduce the speed n1 when the ambient temperature is high.
- 输出转速 N2[rpm] The output speed**
输出转速按照此公式通过输入转速n1和传动比i计算出来: n2=n1/i
Output rotational speed according to the formula by typing speed n1 and transmission ratio i calculated: n2 = n1 / i
- 段/级数 Section/series**
行星齿轮的套数。由于一套行星齿轮无法满足较大的传动比，优势需要两套或三套来满足用户对较大传动比的要求，减速比越大，段/级数越多。由于增加了行星齿轮的数量，所以二级或三级减速机的长度会有所增加，效率会有所下降。
Planetary gear units. Due to a set of planetary gear can't satisfy large transmission ratio, two or three sets of advantage needed to meet the requirements of users to communicate than larger, reduction ratio, the greater the period/series. Because to increase the number of planet gear, headphones or level 3 will increase the length of the speed reducer, efficiency will be decreased.
- 传动效率 Transmission efficiency**
指定额定负载情况下，减速机的传输效率。减速比越大，级数越多，效率越低。
Specify the rated load cases, the transmission efficiency of speed reducer. The reduction ratio, the greater the series, the more the lower the efficiency.
- 平均寿命 The average life span**
指减速机在额定负载下，额定输入转速是减速机的连续工作时间。
Refers to the speed reducer under the rated load, the rated input speed reducer is the continuous working time.
- 定位精度 Positioning accuracy**
在高速机械往复运动中做到精确定位的关键在于尽量减小通过运动产生的角偏差。定位精度取决于两个值，一个是与加载有关的偏转角，涉及到回程间隙的扭转刚度；另一个是与转动控制有关的偏转角，涉及到同步偏差的问题。
The key to achieving precise positioning in high-speed mechanical reciprocating motion is to minimize the angular deviation generated by the motion. The positioning accuracy depends on two values: one is the deflection angle related to loading, which involves the torsional stiffness of the return clearance; Another issue is the deflection angle related to rotational control, which involves synchronization deviation.
- 回程间隙背隙 back clearance**
减速机输出轴与输入轴的最大偏差角，测量时先将齿轮输入轴固定住，然后在输出轴用力矩仪加载一定力矩(2%T2n)，以克服减速机内的摩擦力。
The maximum deviation angle between the output shaft and input shaft of the reducer. When measuring, first fix the gear input shaft, and then load a certain torque (2% T2n) on the output shaft with a torque meter to overcome the frictional force inside the reducer.
- 迟滞曲线 Hysteresis curve**
迟滞曲线是为了得出减速机的扭转刚度，通过检测得到迟滞曲线。检测时，先将减速机输入端固定住，然后在输出端的两个选择旋转方向分别持续的加载到T2B最大输出力矩，继而逐步卸载，用仪器记录下力矩的仿差角，得到的曲线是一条闭合曲线，从中可以计算出减速机回程间隙(jt)和扭转刚度(Ct21)。
The hysteresis curve is used to determine the torsional stiffness of the gearbox, and is obtained through detection. When testing, first fix the input end of the reducer, then continuously load it to the maximum output torque of T2B in two selected rotation directions at the output end, and gradually unload it. Record the imitation angle of the torque with an instrument, and the obtained curve is a closed curve. From this, the return clearance (jt) and torsional stiffness (Ct21) of the reducer can be calculated.
- 转动惯量 Rotational inertia**
本书中的该值均指输入端。表示一个物体尽力保持自己的转动状态 (或禁止或转动) 特征的一个值。
Refers to the speed reducer under the rated load, the rated input speed reducer is the continuous working time.
- 惯量比 Inertia ratio**
指负载惯量与传动系统惯量 (电机加上减速机) 之间的比值。这个比值决定了系统的可控性。λ值越大，各转动惯量差值越大，高动态的动作过程就越难精准控制，建议尽可能将λ值控制在<5，齿轮箱可以将负载惯量降低1/i2。
The ratio between the inertia of the load and the inertia of the transmission system (motor plus reducer). This ratio determines the controllability of the system. λ The larger the value, the greater the difference in various moments of inertia, and the more difficult it is to accurately control the high dynamic action process. It is recommended to try to λ if the value is controlled within<5, the gearbox can reduce the load inertia by 1/i2.
- 噪音 The noise**
单位是分贝 (dB)。此数值是在输入转速为3000转/分时，不带负载，距离减速机一米距离时测量的。
The unit is decibels (dB). This value is measured at an input speed of 3000 rpm, without load, at a distance of one meter from the gearbox.

工作温度°C Working temperature °C	防护等级 Protection grade	润滑 lubrication	安装方式 installation
-10°C~+90°C	IP54/IP65	长效润滑，整个试用期内不添加润滑油	Any/任意

REDUCER SPECIAL NOUN EXPLANATION

减速机专用名词解释

额定输出扭矩

Rated output torque

指减速机长时间(连续工作制)可以加载的力矩(无磨损), 条件应满足负载均匀, 安全系数S=1,理论寿命为20000小时。
Refers to decelerate the captain time (continuously) can load torque (no wear), the condition should be meet the uniform load, the safety coefficient of S = 1, the theory of life for 20000 hours.

加速扭矩

To speed up the torque

指工作周期每小时少于1000次时允许短时间加载到输出端的最大力矩。工作周期每小时大于1000次时, 须考虑使用因素。最大加速扭矩等于故障停止扭矩60%。
Refers to less than 1000 times per hour working period allowed a short period of time when loaded into the maximum torque on the output. When work cycle is more than 1000 times per hour, use factors must be taken into consideration. Maximum speed torque is equal to the failure to stop the torque by 60%.

紧急制动扭矩(Nm)

Emergency braking torque (Nm)

指减速机输出端所能加载的最大力矩, 这个力矩可在减速机寿命期内加载1000次, 绝对不能超过1000次。
The maximum torque that can be loaded at the output end of the gearbox. This torque can be loaded 1000 times during the lifespan of the gearbox, but must not exceed 1000 times.

空载扭矩

No-load torque

指加载到减速机上的以克服减速机内摩擦力的力矩。
The torque applied to the gearbox to overcome the internal friction force.

最大输出扭矩

Maximum output torque

指减速机在静态条件或频繁启动条件下所能承受的输出扭矩, 通常指峰值负载或启动负载。
Refers to the speed reducer under the condition of static conditions or frequent startup can inherit the output torque, usually refers to the peak load or start the load.

实际所需扭矩

Actually the required torque

所需扭矩取决于应用场合的实际工况, 拟选减速机的额定扭矩T2N必须大于这个扭矩。
Required torque depends on the actual working condition of the applications to choose rated torque of the speed reducer T2N must be greater than the torque.

计算用扭矩

Calculating the torque

在选择减速机时被用到, 可以由实际所需转矩T2和系数fs按一下公式得出 $T_{cs}=T_2 * F_s \leq T_n$
In machine of decelerate of choice is used, the actual required torque T2 fs click the formula and coefficient of TCS = T2 * fs Tn or less

侧倾扭矩

Roll torque

指轴向力和径向力作用于输出端轴承上径向受力点的力矩, 计算公式为: $M_{2kmax}=[F_a * y_2 + F_r * (X_2 + Z_2)] / 1000$
Refers to the axial force and radial force is used to output end bearing torque and radial stress points on the calculation formula is: $M_{2kmax} = [F_a * y_2 + F_r * (X_2 + Z_2) / 1000$

轴向力

Axial force

指平行于轴心的一个力, 它的作用点与输出轴端有一定的轴向偏差(Y2)时, 会形成一个额外的弯绕力矩。轴向力超过样本所示的额定值时, 须用联轴节来抵消弯绕力。
Refers to the parallel to the axis of a force, its point of application and the output shaft end has certain axial deviation (Y2), will schedule an additional bend torsion moment. Axial force than the sample shown in the rating, must be used to offset the bending flexure axis.

径向力

Radial force

指垂直作用于轴向力的一个力, 它平行于输出轴, 它的作用点与轴端有一定的轴向距离(X2)这个点成一个杠杆点, 横向力形成一个弯绕力矩。
Refers to a vertical axial force acting on a force, it is parallel to the output shaft, and with it the point of a shaft end of the axial distance (X2) this point into a leverage point, lateral force form a bend torsion moment.

轴伸径向载荷、轴向载荷

Axial radial load, axial load

选择减速机的附加依据是输出轴伸出端上的径向载荷和轴向载荷。轴的强度和轴承的承载能力决定了轴伸的径向载荷。样本中给出的最大允许值是指在最不利的方向作用在轴伸出端中点(即1/2处)的力。当作用力不在中点时, 越接近轴肩, 允许的径向载荷就越大; 相反, 作用点离轴肩越远, 允许的径向载荷就越小。
Select the additional is based on the output shaft speed reducer stretched out on the radial load and axial load. The strength of the shaft and bearing capacity determines the axial and radial load. Samples given in the direction of the maximum allowed is to point to in the most unfavorable effect on the shaft out end point (1/2 point). As hard is not in the middle, the closer it gets to the shoulder, allow the greater the radial load; On the contrary, the further away from the shoulder point, allowing the smaller radial load.

安全系数S

Safety factor S

安全系数等于减速机的额定输入功率与电机功率的比值。
Safety factor is equal to the speed reducer of the ratio of the rated input power and motor power.

使用系数f1

Using coefficient of f1

使用系数表现减速机的应用特征, 它考虑到减速机的负载类型和每日工作时间。
Using coefficient of performance of the reducer application characteristics, it considering the load reducer type and the daily working hours.

扭转刚度

Torsional rigidity

由加载力矩和所产生的扭转角之间的比率来定义, $C_{t21}=\Delta T/\Delta$ 它说明需要用多大的力矩才能把输出轴转动一弧分。
Produced by the load torque and the ratio between the torsion Angle to define, $C_{t21} = \text{delta } T/\text{delta}$ that need to use how much torque to the output shaft rotational arc).

- 高精度 High precision
- 高刚性 Rigidity
- 高负载容量 High load capacity
- 高扭矩 High torque
- 使用寿命长 long service life

SERIES ZQB

ZQB系列行星减速机

产品特点 Product Features

- ⊗ 高精度: 齿隙低于3弧分。
 - ⊗ 使用顶级超精密机床加工并结合全球领先的磨齿工艺, 齿轮精度可控制在ISO4级以下, 确保减速机高效, 长寿命。
 - ⊗ 采用笼式行星支架结构, 与输出轴一体式设计, 实现高刚度和高精度。
 - ⊗ 行星轮轴承采用不含保持架的满滚针轴承, 增大减速机输出扭矩和刚性。
 - ⊗ 可适配全球任何品牌的伺服电机。
 - ⊗ 使用合成润滑脂, 并采用IP65密封设计, 不泄漏, 免维护。
- ⊗ High precision: The backlash is less than 3 arc minutes.
 - ⊗ Using top-notch ultra precision machine tools and combined with the world's leading gear grinding process, the gear accuracy can be controlled below ISO4 level, ensuring efficient and long service life of the reducer.
 - ⊗ Adopting a cage planetary support structure and integrated design with the output shaft, achieving high stiffness and precision.
 - ⊗ The planetary gear bearing adopts a full needle roller bearing without a cage to increase the output torque and rigidity of the reducer.
 - ⊗ Suitable for servo motors of any brand worldwide.
 - ⊗ Using synthetic grease and adopting IP65 sealing design, it is leak free and maintenance free.

结构图 Structural Diagram

产品特点 Product Features

- ⊗ 高精度:齿隙低于3弧分。
- ⊗ 使用顶级超精密机床加工并结合全球领先的磨齿工艺，齿轮精度可控制在ISO4级以下，确保减速机高效，长寿命。
- ⊗ 采用笼式行星支架结构，与输出轴一体式设计，实现高刚度和高精度。
- ⊗ 行星轮轴承采用不含保持架的满滚针轴承，增大减速机输出扭矩和刚性。
- ⊗ 可适配全球任何品牌的伺服电机。
- ⊗ 使用合成润滑脂，并采用IP65密封设计，不泄漏，免维护。
- ⊗ High precision: The backlash is less than 3 arc minutes.
- ⊗ Using top-notch ultra precision machine tools and combined with the world's leading gear grinding process, the gear accuracy can be controlled below ISO4 level, ensuring efficient and long service life of the reducer.
- ⊗ Adopting a cage planetary support structure and integrated design with the output shaft, achieving high stiffness and precision.
- ⊗ The planetary gear bearing adopts a full needle roller bearing without a cage to increase the output torque and rigidity of the reducer.
- ⊗ Suitable for servo motors of any brand worldwide.
- ⊗ Using synthetic grease and adopting IP65 sealing design, it is leak free and maintenance free.

产品特点 Product Features

- 采用直齿齿轮转动，经过渗碳淬火处理，齿向齿阔修行处理，表面喷塑，设备运行平稳，噪音小。
- 结构简单，交货期快，可大批量生产。
- 减速机种类齐全，满足市场上大部分的应用工况。
- Adopting straight tooth gears for rotation, undergoing carburization and quenching treatment, tooth width adjustment treatment, surface spraying, stable equipment operation, and low noise.
- Simple structure, fast delivery time, and capable of mass production.
- The range of reducers is complete, meeting most of the application conditions in the market.

产品特点 Product Features

- ☞ 铝合金材质可提高散热能力，缓解升温现象；
 - ☞ 往复定位精度佳；
 - ☞ 定制化的输入端，可搭配各式马达；
 - ☞ 油封操作特殊设计，正常使用下不须保养亦不用更换润滑油；
 - ☞ 输出扭矩高；
 - ☞ 多样化的出轴可应用各种场合。
- ☞ Aluminum alloy material can improve heat dissipation capacity and alleviate heating phenomenon;
 - ☞ Good reciprocating positioning accuracy;
 - ☞ Customized input end that can be paired with various motors;
 - ☞ The oil seal is specially designed for operation and does not require maintenance or replacement of lubricating oil under normal use;
 - ☞ High output torque;
 - ☞ The diversified output shaft can be applied in various occasions.

高精行星减速机

ZQT系列

结构图 Structural Diagram

产品特点 Product Features

- ⊗ 高精度:齿隙低于3弧分。
- ⊗ 使用顶级超精密机床加工并结合全球领先的磨齿工艺，齿轮精度可控制在ISO4级以下，确保减速机高效，长寿命。
- ⊗ 采用笼式行星支架结构，与输出轴一体式设计，实现高刚度和高精度。
- ⊗ 行星轮轴承采用不含保持架的满滚针轴承，增大减速机输出扭矩和刚性。
- ⊗ 可适配全球任何品牌的伺服电机。
- ⊗ 使用合成润滑脂，并采用IP65密封设计，不泄漏，免维护。
- ⊗ High precision: The backlash is less than 3 arc minutes.
- ⊗ Using top-notch ultra precision machine tools and combined with the world's leading gear grinding process, the gear accuracy can be controlled below ISO4 level, ensuring efficient and long service life of the reducer.
- ⊗ Adopting a cage planetary support structure and integrated design with the output shaft, achieving high stiffness and precision.
- ⊗ The planetary gear bearing adopts a full needle roller bearing without a cage to increase the output torque and rigidity of the reducer.
- ⊗ Suitable for servo motors of any brand worldwide.
- ⊗ Using synthetic grease and adopting IP65 sealing design, it is leak free and maintenance free.

中空旋转平台减速机

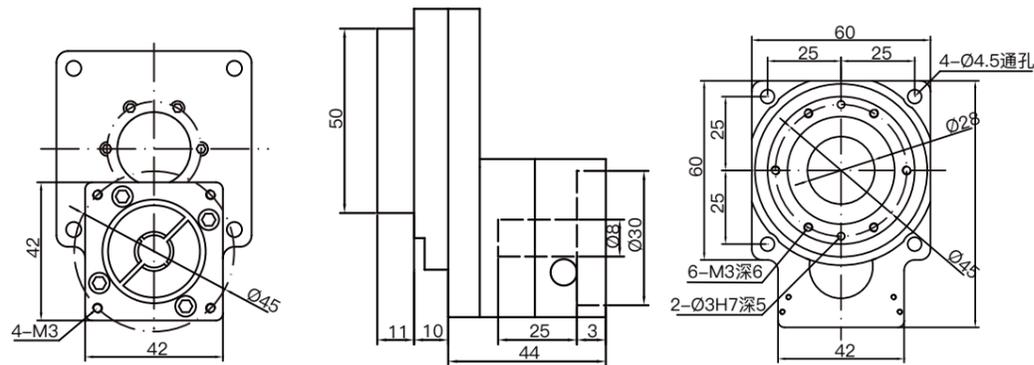

ZQK系列

型号说明 Model Specification

结构图 Structural Diagram

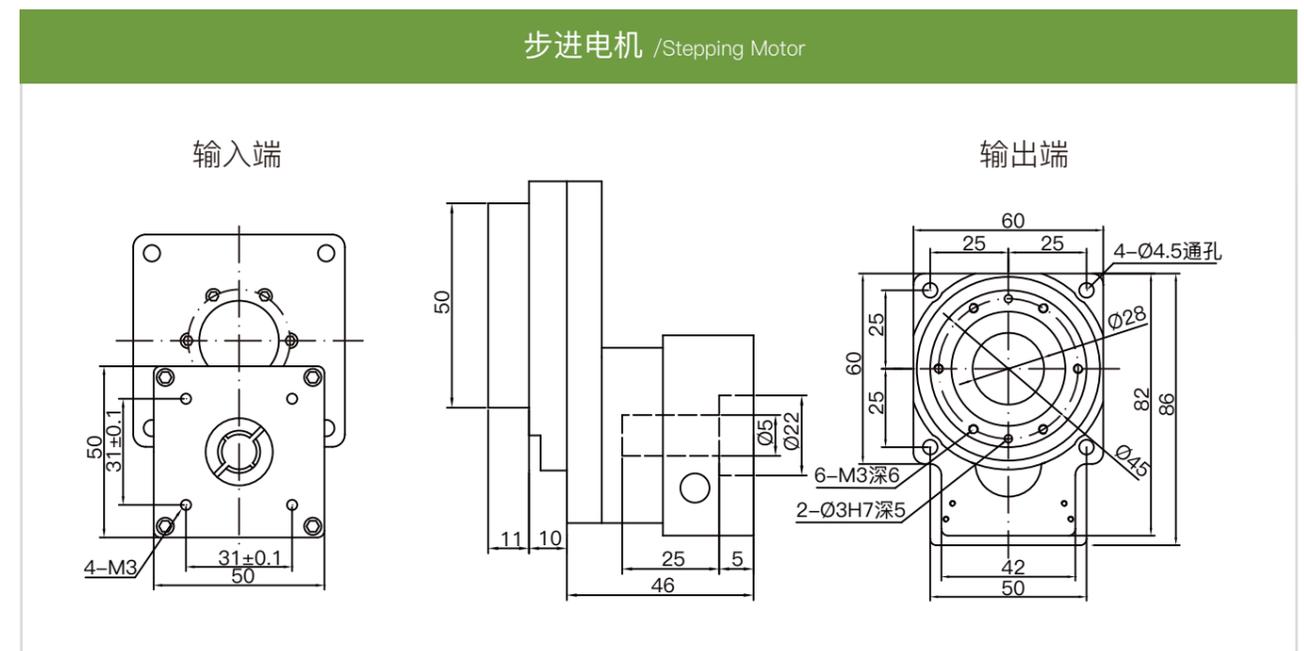

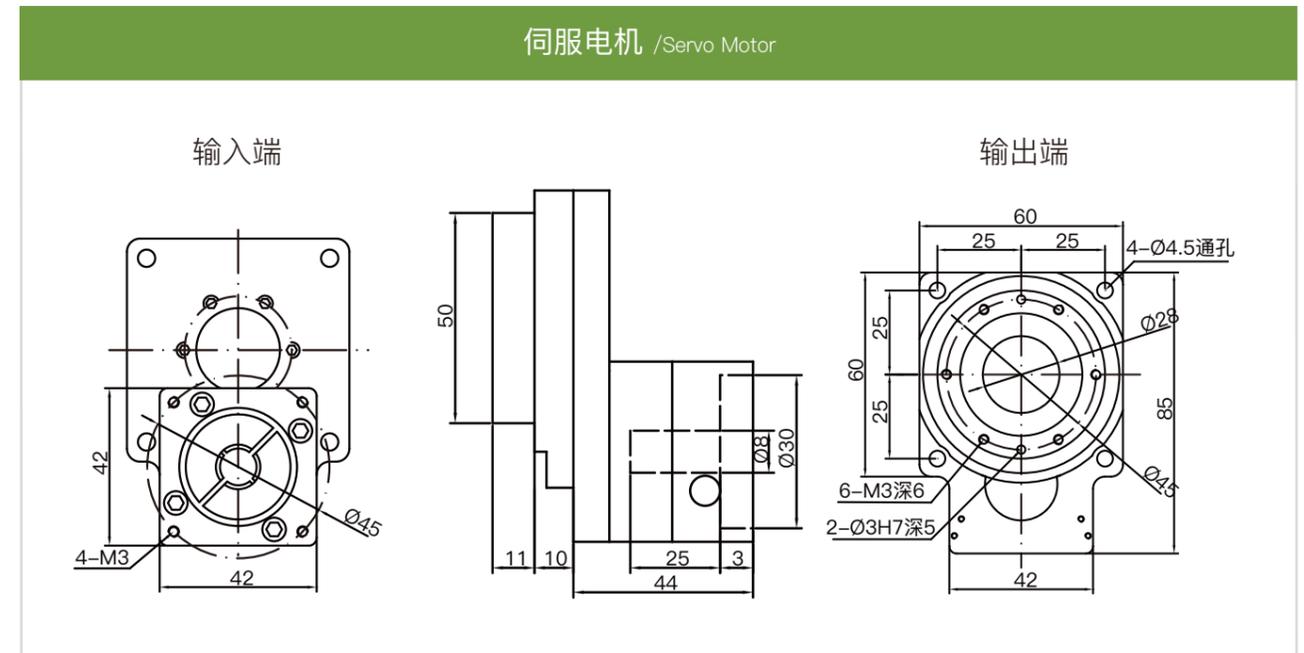

产品特点 Product Features

- ☞ 转盘为中空结构，电机连接在侧边，方便冶金中的气管、电线安装。
- ☞ 采用单级螺旋齿轮减速，增大电机的输出扭矩。空间极小，重复定位精度5弧秒以下。
- ☞ 转盘由精密交叉滚子轴承支撑，内外圈及滚子之间存在预紧力，可受径向、轴向、倾覆等各种力矩，刚性是传统轴承的10倍以上。
- ☞ 在组装完成后，再次对转盘的外径，端面进行磨削（精车级），保证高精度。
- ☞ 可定制法兰及输入轴孔，适合连接任意品牌的伺服电机、步进电机。
- ☞ The rotary table is of a hollow structure, with the motor connected on the side, facilitating the installation of gas pipes and wires in the smelting tool.
- ☞ Adopting a single stage helical gear reduction to increase the output torque of the motor. The space is extremely small, and the repeated positioning accuracy is less than 5 arc seconds.
- ☞ The rotary table is supported by precision cross roller bearings, and there is pre tension between the inner and outer rings and rollers. It can withstand various moments such as radial, axial, and overturning, and its rigidity is more than 10 times that of traditional bearings.
- ☞ After assembly, grind the outer diameter and end face of the rotary table again (precision turning level) to ensure high accuracy.
- ☞ Customizable flange and input shaft hole, suitable for connecting any brand of servo motor and stepper motor.

中空旋转平台选购要点 / Key shopping points

■ 计算负载/搬运物转动惯量 (JW)

搬运物的转动惯量须以传动装置转动惯量的30倍一下为标准。

■ 计算加速转矩 (Ta) 参考以下公式

$$\text{加速转矩 } T_a [\text{N}\cdot\text{m}] = (J_M + J_A + J_W) * \frac{\pi}{30} * \frac{(N_2 - N_1)}{t_1}$$

J_M : 马达转动惯量[$\text{kg}\cdot\text{m}^2$]

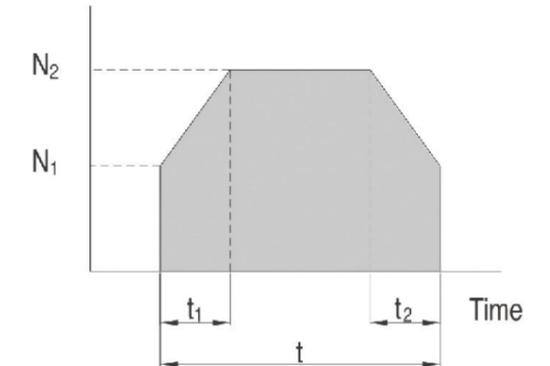

J_A : 机械转动惯量[$\text{kg}\cdot\text{m}^2$]

J_W : 负载转动惯量[$\text{kg}\cdot\text{m}^2$]

N_2 : 工作转速[r/min]

N_1 : 启动转速[r/min]

t_1 : 加速 (减速) 时间[S]

■ 计算所需转矩

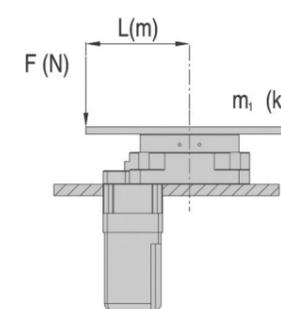

所需的转矩是通过摩擦阻抗引起的负载转矩与转动惯量引起的加速转矩相加之和乘以安全系数计算得出的。

$$\begin{aligned} \text{所需转矩 } I &= (\text{负载转矩}[\text{N}\cdot\text{m}] + \text{加速转矩}[\text{N}\cdot\text{m}]) \times \text{安全系数} \\ &= (T_L + T_a) \times S \end{aligned}$$

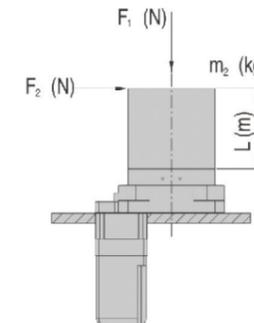

安全系数S大于1.5。

■ 轴向负载，惯性力矩负荷的计算

在中空旋转平台上按照如下所示施加负载时，请确保采用一下公式计算得出轴向负载和惯性力矩负荷处于规定范围内。

$$\begin{aligned} \text{轴向负载 } [N] : F_t &= F + m_1 \cdot xg \\ \text{惯性力矩负荷 } [N\cdot\text{m}] : M &= F \cdot xL \\ g : \text{重力加速度 } &9.807 [\text{m/s}^2] \end{aligned}$$

$$\begin{aligned} \text{轴向负载 } [N] : F_t &= F_1 + m_2 \cdot xg \\ \text{惯性力矩负荷 } [N\cdot\text{m}] : M &= F_2 \cdot x(L + A) \\ g : \text{重力加速度 } &9.807 [\text{m/s}^2] \end{aligned}$$

维护说明

减速机在使用过程中应定期检查油脂的质量，对于混入杂质或变质的油脂需及时更换。一般情况下，对于长期连续工作的减速机，按运行20000小时更换油脂，间断使用的减速机，在重新运转之前应检查润滑脂的情况，再润滑可由专业厂家完成，根据运转情况决定再润滑的间隔和数量。如果旧的润滑脂不能完全被清除，则应该相应限制所注入润滑脂的数量，以避免过度润滑。如再润滑周期间隔较长，推荐对全部润滑脂进行彻底的更换。油脂添加量为内部空间1/3为宜，如输入转速较低可适当增加，但最多不能超过内部空间的1/2。输出端回转部分采用唇形密封圈(TC型)密封，密封圈的更换一般以是否有油脂泄漏作为更换的依据。对于间断使用的减速机，在重新运转之前也应检查其密封情况，判断有无必要更换密封圈，更换密封圈时只需拆下相应密封圈座即可更换。

工作中当发现油温升温超过90度或产生不正常的噪音时，应停止使用，检查原因且排除故障后，方能继续运转。

During the use of the gearbox, the quality of the grease should be regularly checked, and any mixed impurities or deteriorated grease should be replaced in a timely manner.

In general, for reducers that operate continuously for a long time, the grease should be replaced after 20000 hours of operation. For reducers that are used intermittently, the condition of the grease should be checked before re operation. Re lubrication can be completed by a professional manufacturer, and the interval and quantity of re lubrication should be determined based on the operation situation. If the old grease cannot be completely removed, the amount of grease injected should be correspondingly limited to avoid excessive lubrication. If the interval between re lubrication cycles is long, it is recommended to thoroughly replace all lubricating grease. The appropriate amount of grease to be added is 1/3 of the internal space. If the input speed is low, it can be increased appropriately, but the maximum amount cannot exceed 1/2 of the internal space

The rotating part of the output end is sealed with a lip shaped sealing ring (TC type), and the replacement of the sealing ring is generally based on whether there is grease leakage. For gear reducers that are intermittently used, the sealing condition should also be checked before restarting to determine whether it is necessary to replace the sealing ring. When replacing the sealing ring, simply remove the corresponding sealing ring seat to replace it.

When it is found that the oil temperature rises by more than 90 degrees or abnormal noise is generated during work, it should be stopped from use, the cause checked, and the fault eliminated before continuing to operate.

安装说明

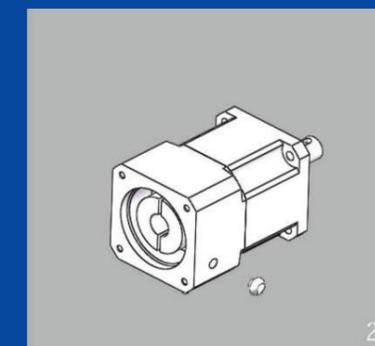

正确的安装、使用和维护减速机是保证机械设备正常运行的主要因素。因此，在您使用晟奇行星减速机的过程中，请务必安装安装步骤正确的安装和使用。

The correct installation, use, and maintenance of the gearbox are the main factors to ensure the normal operation of mechanical equipment. Therefore, during the process of using the Zeki planetary reducer, please ensure that the installation steps are correct for installation and use.

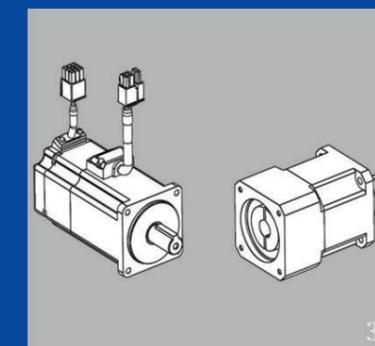

擦拭马达轴上的防锈油润滑脂等，并严格检查电机与减速机相连接的各部位尺寸是否匹配。

Wipe the rust proof oil and grease on the motor shaft, and strictly check whether the dimensions of each part connected to the motor and reducer match.

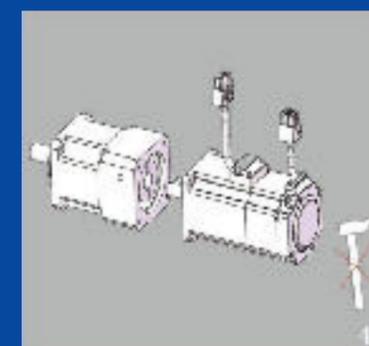

取下法兰外侧的防尘塞，调整输入轴弹性夹紧装置使紧固螺栓与孔位对齐，插入内六角扳手松开紧固螺栓。

Remove the dust plug on the outer side of the flange, adjust the input shaft elastic clamping device to align the fastening bolt with the hole position, and insert an Allen wrench to loosen the fastening bolt.

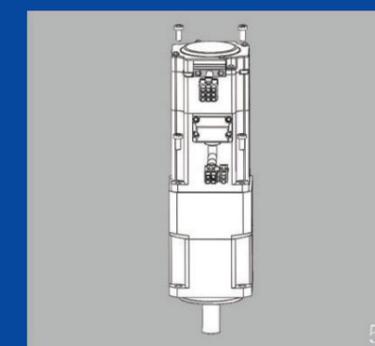

将电机轴缓缓插入减速机输入轴中 连接时必须保证减速机输入轴与电机输出轴同轴度致，且外侧法兰平行。同轴度不一致，会导致电机轴断或减速机齿轮磨损。

Slowly insert the motor shaft into the input shaft of the reducer. When connecting, the input shaft of the reducer must have the same coaxiality as the output shaft of the motor, and the outer flange must be parallel. Inconsistent coaxiality will lead to motor shaft breakage or gear wear reduction gear.

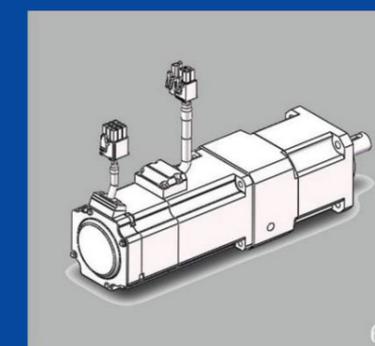

在安装时，严禁用铁锤等击打，防止轴向力或径向力过大损坏轴承或齿轮。

During installation, it is strictly prohibited to strike with a hammer or other tools to prevent excessive axial or radial force from damaging the bearings or teeth.

连接前，先将电机与减速机方位对齐，为保证受力均匀，先将任意一个对角的安装螺栓旋上，但不要旋紧，然后将另外一个对角的螺栓也旋上，最后逐个旋紧。

Before connecting, align the motor with the direction of the reducer. To ensure uniform force, first screw on any diagonal installation bolt, but do not tighten it. Then screw on the other diagonal bolt, and finally tighten it one by one.

最后，旋紧紧固螺栓。所有紧固螺栓均需用力矩扳手按标明的固定扭力矩数据进行固定和检查。

Finally, tighten the fastening bolts. All fastening bolts need to be fixed and inspected using a torque wrench according to the indicated fixed torque data.
